

A detailed 3D illustration of biological structures. In the foreground, several large, biconcave red blood cells are shown in shades of red and orange. Interspersed among them are various types of viruses, including a prominent one with a spherical shape and numerous sharp, dark spikes. The background is a dark, teal-blue space filled with smaller, more complex cellular structures, possibly representing a tissue or a larger organism's internal environment. The overall lighting is dramatic, with highlights on the cells and viruses, creating a sense of depth and scientific accuracy.
